# Itron & Actaris at a glance

In 2006

**\$1.7 Billion of revenue\***

274 million € EBITDA,

Public company (NASDAQ ITRI)

**8,500 people**

45 nationalities

**Present in 38 countries**

30+ production sites and 70+ sites

**300 million meters**

in service in the world (in more than 130 countries)

**125 years of existence**

19th century roots

# Electricity portfolio

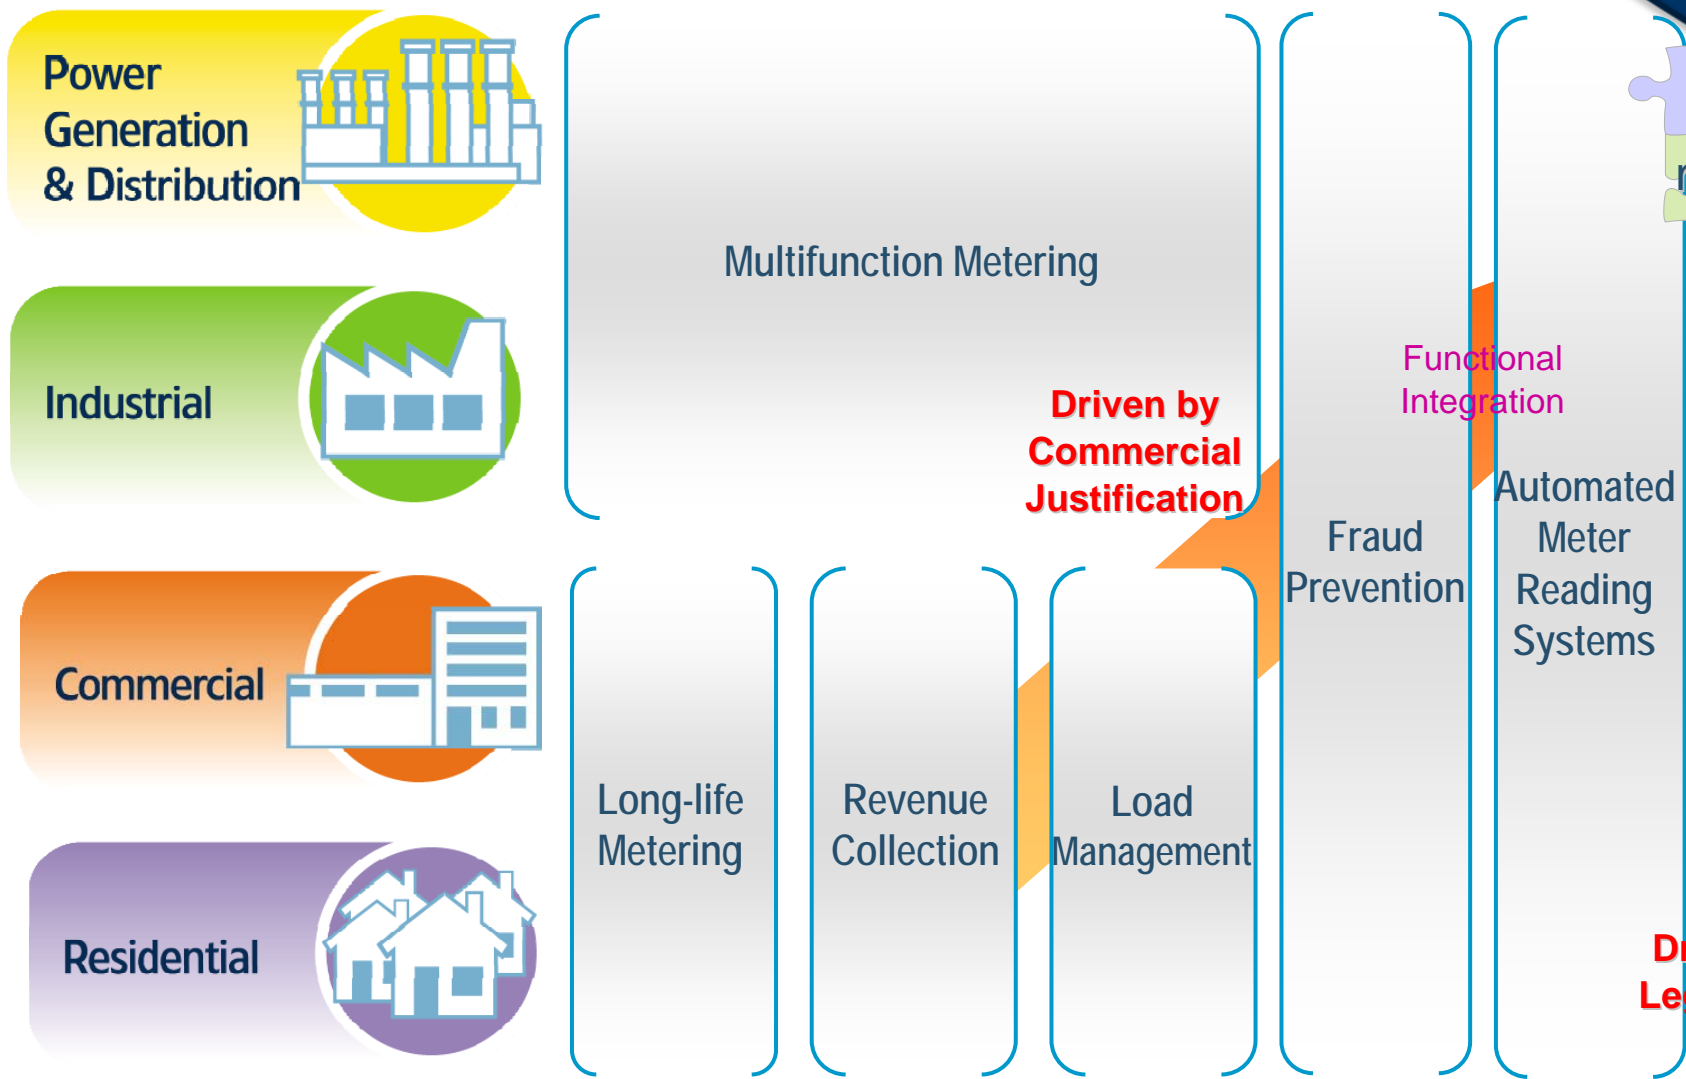

## Our tailored solution for every business need

We provide Utilities worldwide with a comprehensive range of high performance meters, systems and services for applications ranging from prepayment and automatic meter management to complex T&D systems.

- **Residential**  
Electromechanical and electronic meters with associated software
- **Prepayment**  
One-way and two-way meters, systems and services for complete data management and revenue collection
- **Automatic Meter Management, AMI**  
Meters and systems for remote reading and data management
- **Commercial and Industrial**  
Meters and systems (including AMM) for commercial to complex industrial
- **Network management** Transmission and Distribution meters and systems; Demand Management
- **Testing, Calibration**
- **Professional Services**

# Smart Metering Market Requirements

# Smart Metering Trends

- **Rising demand for self-communicating residential meters and systems via PLC or GPRS**
- **Increasing need for AMM rather than AMR only,**
  - Remote load management,
  - Remote disconnection
  - Remote reconfiguration
  - Token less prepayment
- **Managed Services**
  - Actaris manages the operation of the AMM System for a fixed contract period
- **More stringent meter reading legislation**

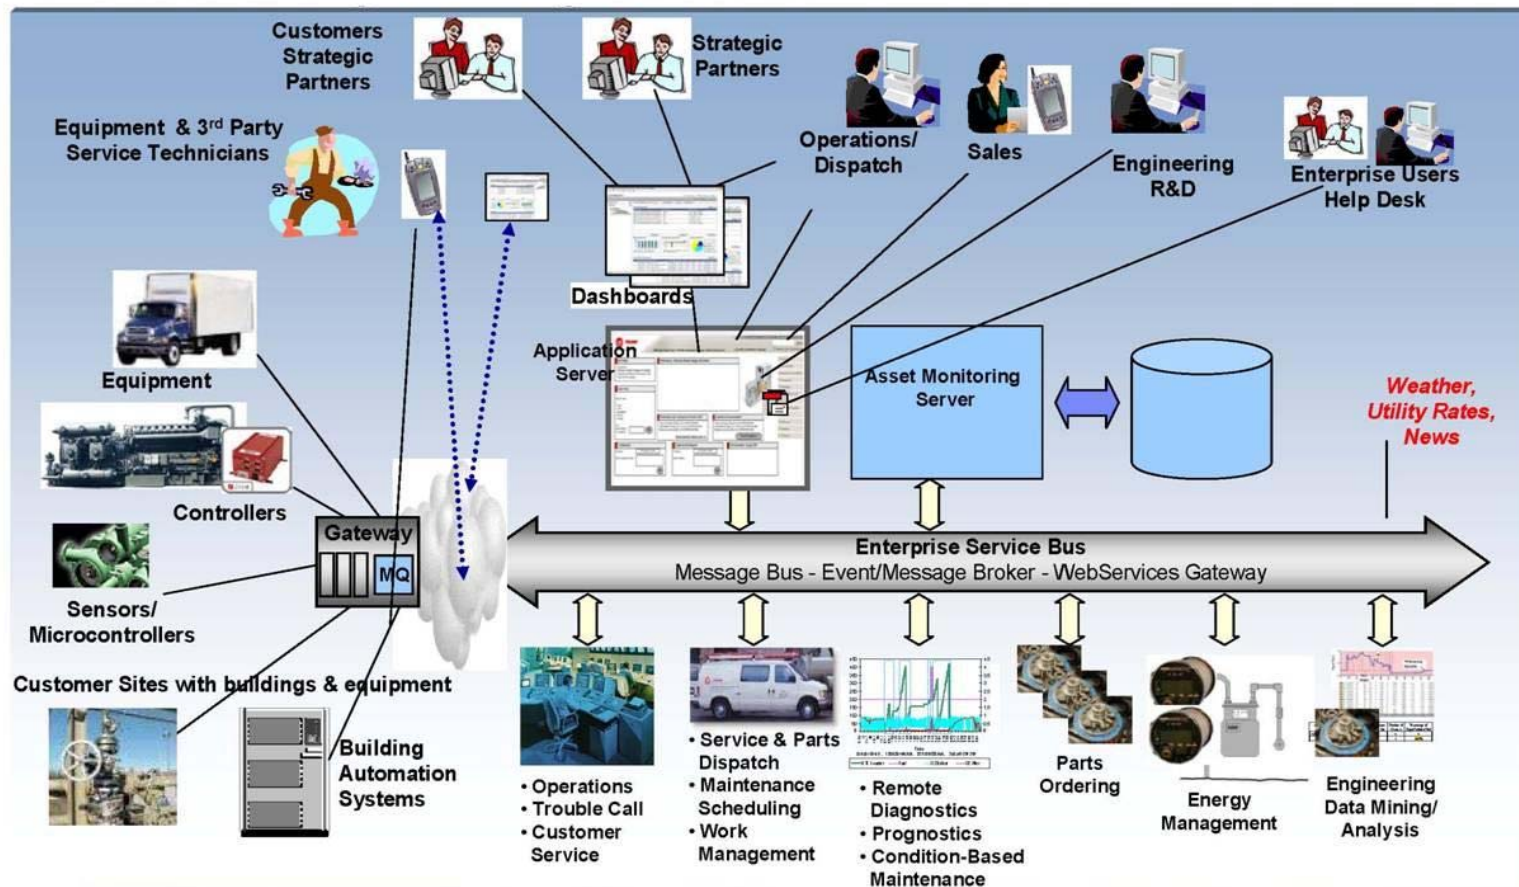

The most **reliable** technology based on operational **experience**

# Smart Metering – Integrated in the IT Infrastructure

## A Changing World for Meter Manufacturers and Meter Managers

## The Meter Data Management Process

**Collection & Communications: Open Standards, Bidirectional Communication to each Meter, Integrated Loadcontrol and Demand Management, Interoperability of Meters**

# Agenda

# Meter Point – Actaris ACE4000

# ACE4000 Residential Meter Specifications

## Metrology

- Class 1, 5(100)A, 3x230/400V (4- or 3 wire), 12kV isolation
- Approved for single phase and 3-phase installation.
- -40°C to +70°C temperature range.
- 1 x Pulse Output & 2 x Pulse Inputs, Digital Out / Relay, External or Internal Contactor / Load-limiter

## Advanced Features (C&I)

- Multi channel Load profile – 1min to 1 hour
- Active Energy Import/Export, Re-Active Energy
- Billing hourly, daily, monthly.
- Support for up to 4 Tariff rates.
- Event /alarm management for 10 events
  - Magnetic Field Detect, Open Cover Detect, etc.
- Digital input / Digital output control.

## Communication

- Full SMS & GPRS support, or PLC, (or Other Wireless)
- Internal and external aerial solutions
- M-Bus master interface (slave meters plug & play)
- “Plug-&-Play”, XML-based communications

# Which Communication Technology For Which Situation ?

## Key factors for the future:

- PLC & RF technology evolution ?
- Future modem prices ?
- Future GPRS operator prices ?
- Future costs of field work ?
- Introduction of new technologies which are commercially & practically competitive ?

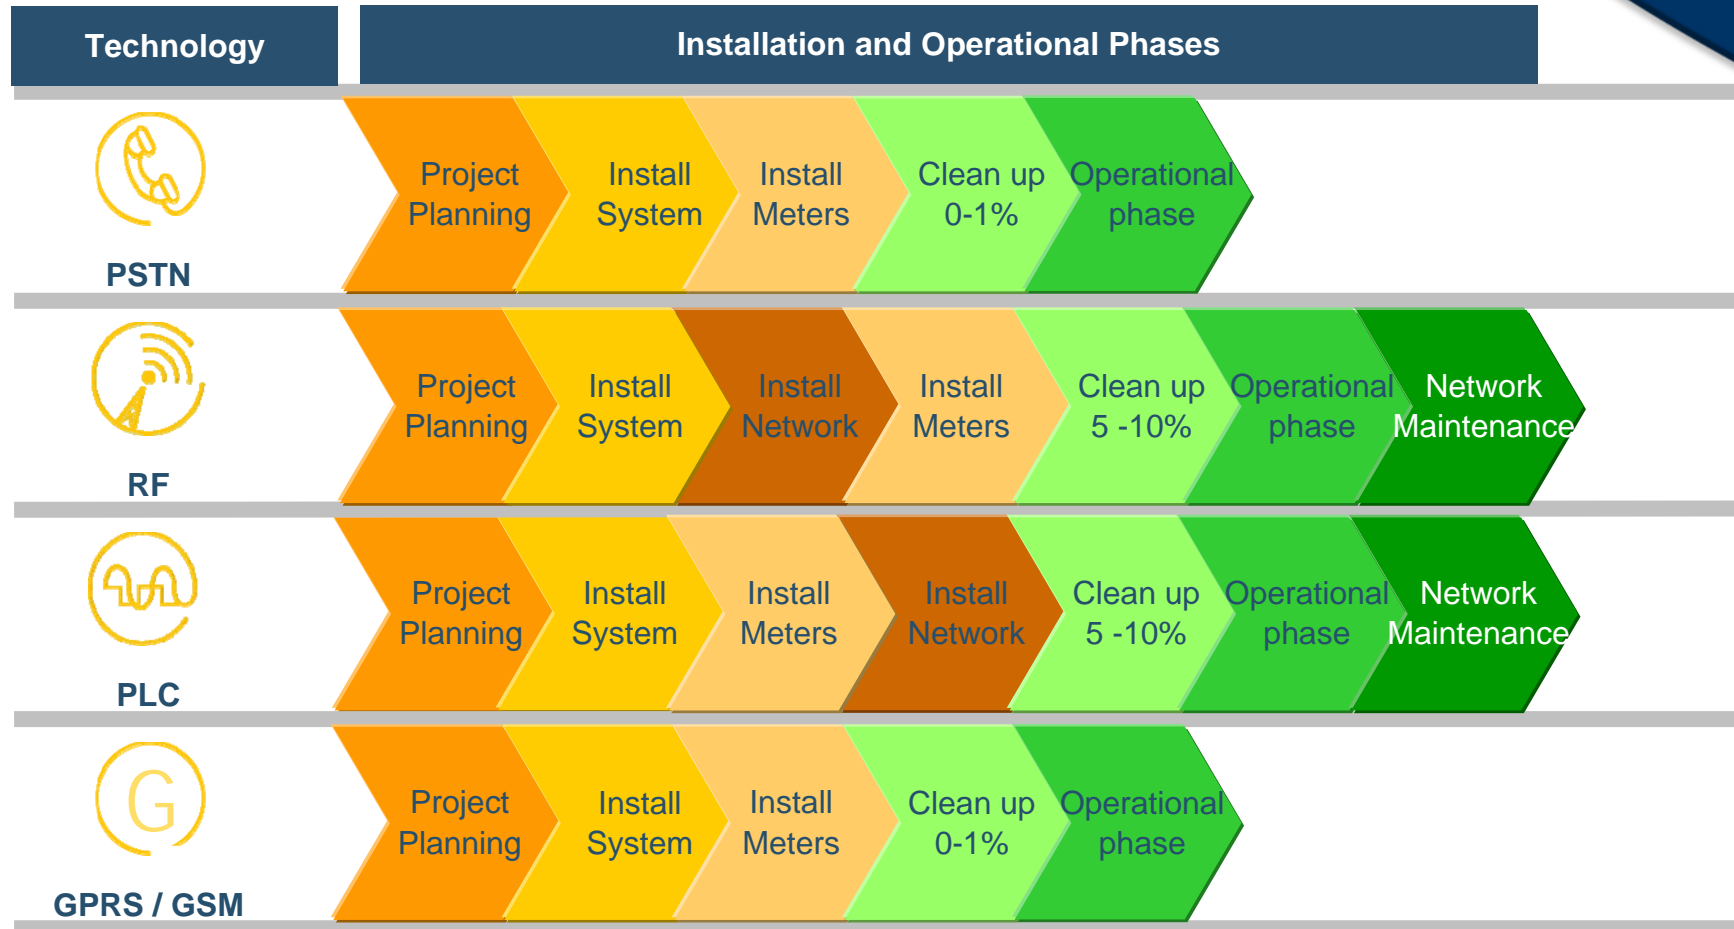

# Technology comparison

Technology	Application	Advantage	Disadvantage
 <b>PSTN</b>	<ul style="list-style-type: none"> <li>• High volume data</li> <li>• Commercial / Industrial</li> <li>• Concentrator to system</li> </ul>	<ul style="list-style-type: none"> <li>• Reliability</li> <li>• High network availability</li> </ul>	<ul style="list-style-type: none"> <li>• Communication cost</li> <li>• Modem cost</li> </ul>
 <b>RF</b>	<ul style="list-style-type: none"> <li>• High density Urban</li> <li>• Rural</li> <li>• AMR (Monthly(95%))</li> <li>• Load Management</li> </ul>	<ul style="list-style-type: none"> <li>• Customer can own network</li> <li>• Speed of communication</li> <li>• Low cost communication</li> </ul>	<ul style="list-style-type: none"> <li>• Location of concentrators</li> <li>• Network Maintenance cost</li> <li>• Experience and expertise</li> </ul>
 <b>PLC</b>	<ul style="list-style-type: none"> <li>• High density Urban</li> <li>• AMR (Monthly (95%) +</li> <li>• Load Management</li> <li>• Used in Stable network</li> </ul>	<ul style="list-style-type: none"> <li>• Customer can own network</li> <li>• Attractive meter cost</li> </ul>	<ul style="list-style-type: none"> <li>• Network Maintenance cost</li> <li>• Experience and Expertise</li> <li>• Variable with load level</li> </ul>
 <b>GPRS / GSM</b>	<ul style="list-style-type: none"> <li>• High density Urban</li> <li>• Rural</li> <li>• AMR (Monthly (100%) +</li> <li>• Load Management</li> </ul>	<ul style="list-style-type: none"> <li>• Reliability</li> <li>• Low installation cost</li> <li>• Quick rollout</li> </ul>	<ul style="list-style-type: none"> <li>• Cost of modem</li> </ul>

**Note – Fibre Optic Cables:**

Lack of infrastructure in many cities and expensive to invest. Proprietary Fibre network is not economically viable.

# Technology comparison

# Key Risk Assessment Of Current Technologies

Key Risks Assessment	PLC	GPRS	RF
	Risk	Risk	Risk
Inadequate Technical Coverage / Performance	Medium	Medium	High
Failing Dedicated Infrastructure Hardware Impact	High	None	High
Dependency On "Proprietary" Skills	High	Low	High
Network Infrastructure Maintenance "Peace Of Mind"	High	Low	High
Performance Interference Due To Changing Factors	Medium	Low	Medium
Dependency On Individual Companies (Future Price, Stability, Availability, .....)	High	Low	High

What costs do utilities associate with these risk differentials ??

# Technology Life Cycle Cost Comparison (2005, Customer Analysis in Sweden)

## A Scenario.....

	PLC	GPRS	RF
Summary Annual Cost Per Metering Point	€	€	€
Investment Annual Costs (including meter & installation)	21,7	22,5	27,4
Maintenance Annual Costs	8,4	4,5	11,1
Annual Communication Costs	1,6	3,3	2,7
<b>Total Annual Costs Per Point For Utility</b>	<b>31,6</b>	<b>30,3</b>	<b>41,2</b>

### **Key Notes:**

- 1) PLC & GPRS costings based on urban area ("best case" for PLC).
- 2) GPRS costing assumes 4 meters "daisy-chained" in a meter room.  
(note that most urban meter rooms in Sweden have many more than 4 meters)
- 3) RF costing represents a typical rural town environment ("best case" for RF).
- 4) GPRS costings based on latest quotes for modems and traffic costs.
- 5) 10 year life cycle assumed for all calculations.

Itron

ACTARIS

## Customer Care Combines Energy-, Cost-, and Bill-Analysis in One Integrated Package

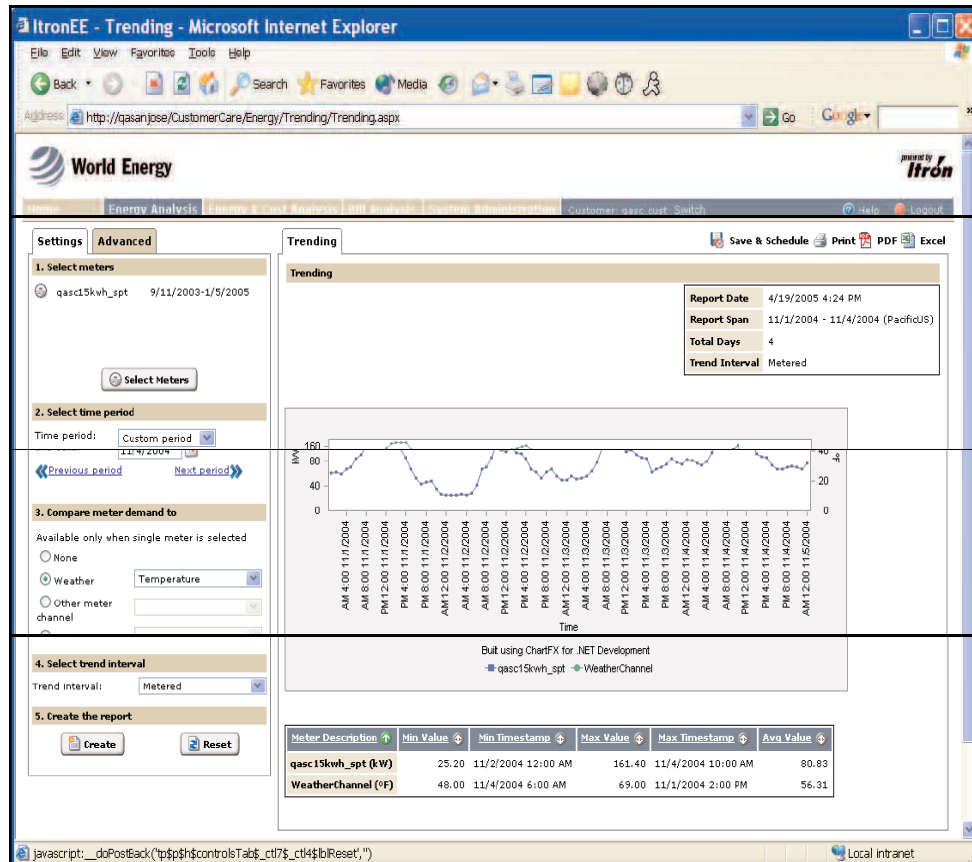

- Leveraging Data from Multiple Sources
- Unified Data Presentation

## Empowers Customers to Change Behavior -> Optimise Energy Usage, Save Money:

- How does my new dynamic rate work? How much of my bill is attributed to high price periods?
- What happens to my costs if I adjust usage?

# Itron IEE Customer Care Modul

- Custom Web-Interface allows to generate and view Reports, Trend Analyses, Benchmarking, etc.
- Bills can be read, analyzed and compared
- Automatic transmission of Data per email, Alarms can be sent via SMS
- „What-If“ Analyses

# Itron OpenWay Meter & MDM System

Itron

ACTARIS

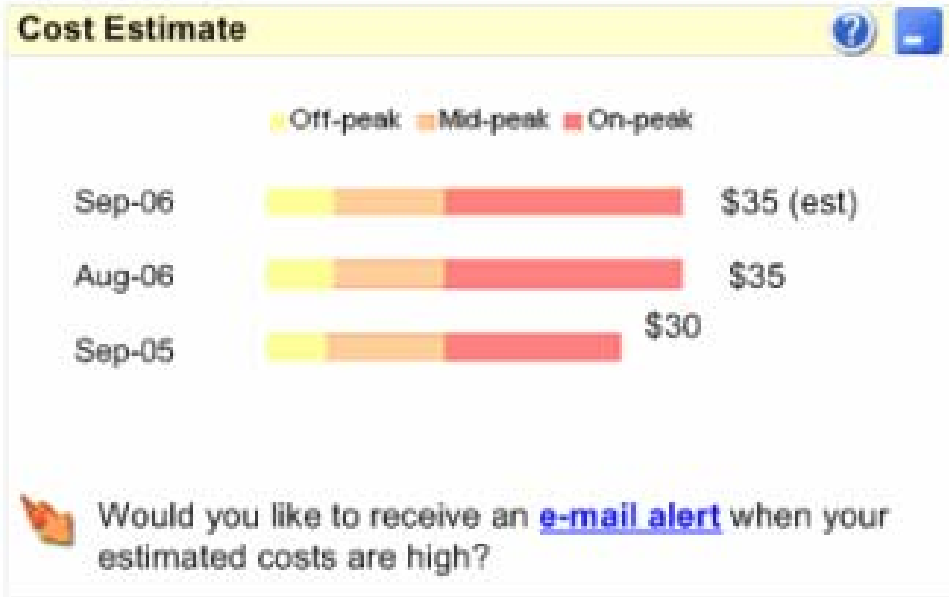

## Next-generation Smart Meter Infrastructure:

- advanced, two-way communication technology
- enables utilities to empower ALL their customers to participate in demand response and energy conservation programs,
- supports the ongoing development and deployment of the “smart grid.”

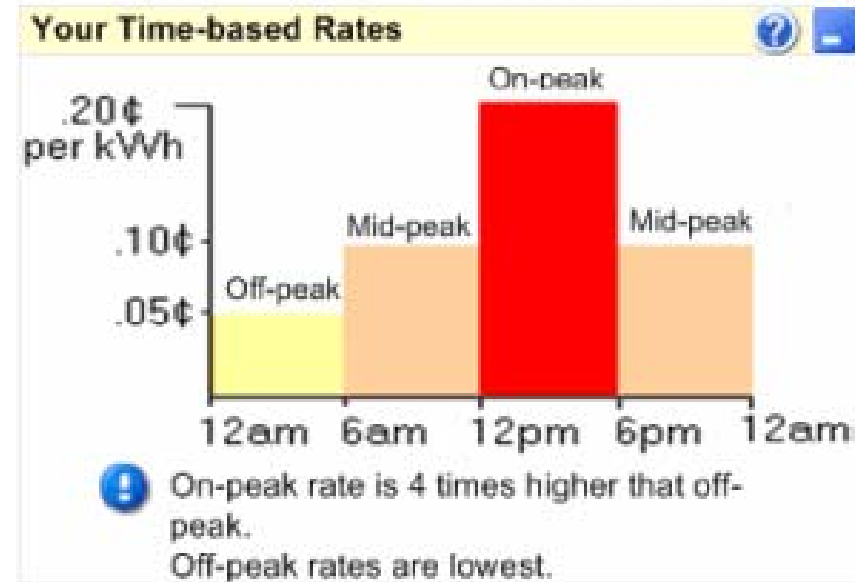

**MDM, Open Standards, Bidirectional Communication to each Meter, Integrated Loadcontrol and Demand Management, High Functionality of the Meters**

# IEE – Customer Care Website-Portlets for Residential and Small Commercial Customers

To increase deployment flexibility, product configurability, and seamless website integration Itron delivers the analytics to the customer as individual web portlets that are embedded in the utility's existing web portal application.

This allows the utility to offer its customers and to seamlessly embed rich analytic functionality within its existing portal.
