**Metabolic engineering approaches to  
improve the production of organic acids**

# Why organic acids?

important substance class with multiple applications:

- food & feed additives
- cleaning products
- building block chemicals

Metabolic engineering of cell factories to enable and improve production.

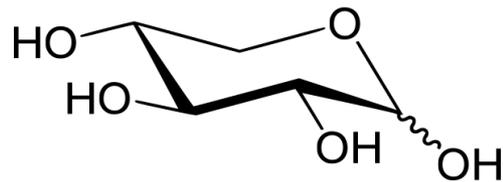

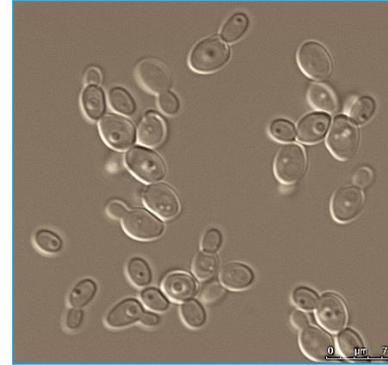

- L-lactic acid
- *cis*-aconitic acid

# *Sugiyamaella lignohabitans*

University of Natural Resources  
and Life Sciences, Vienna  
Department of Biotechnology

- ✓ Non-conventional yeast, belonging to the *Sugiyamaella* clade
- ✓ Isolated from a decayed tree (*Kurtzman, 2007*)
- ✓ No member of the CTG-clade (serine instead of leucine)
- ✓ Natural capability to convert xylose

# pH tolerance: a comparison

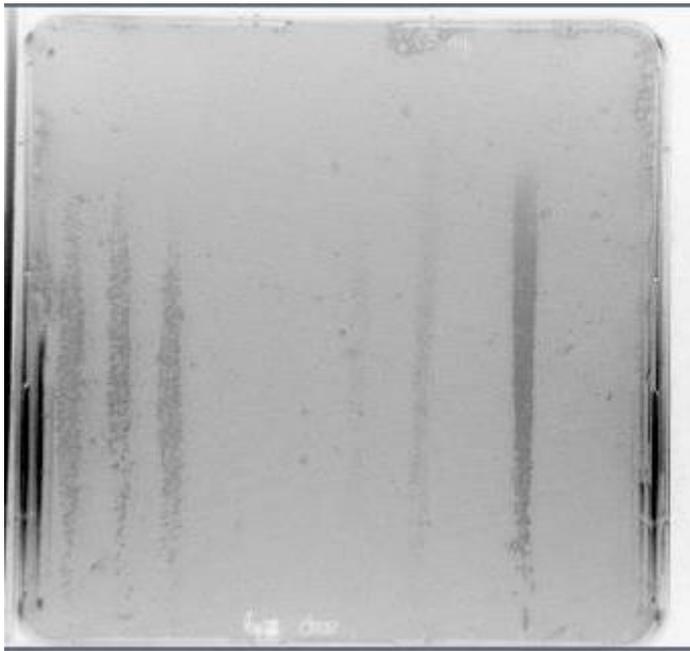

pH 1,5

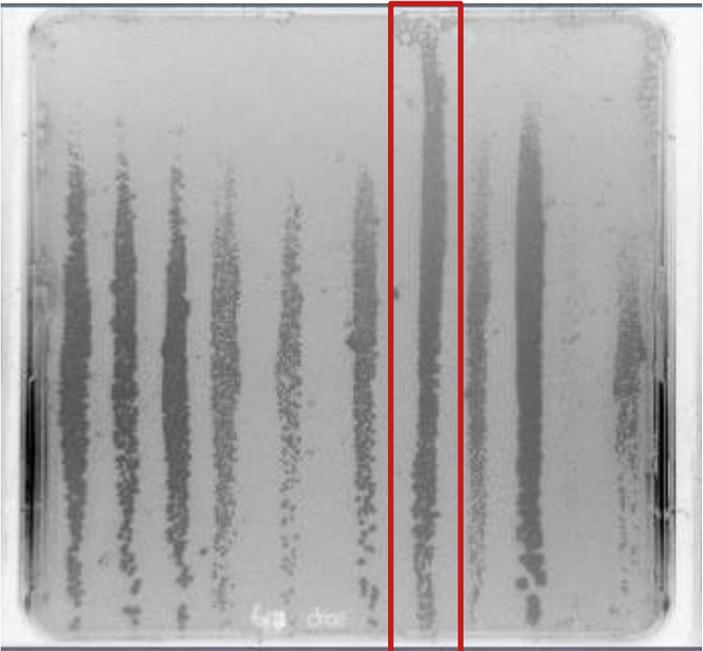

pH 9

# Lactic acid production for PLA

L-LDH *Lactobacillus plantarum* ATCC 8014

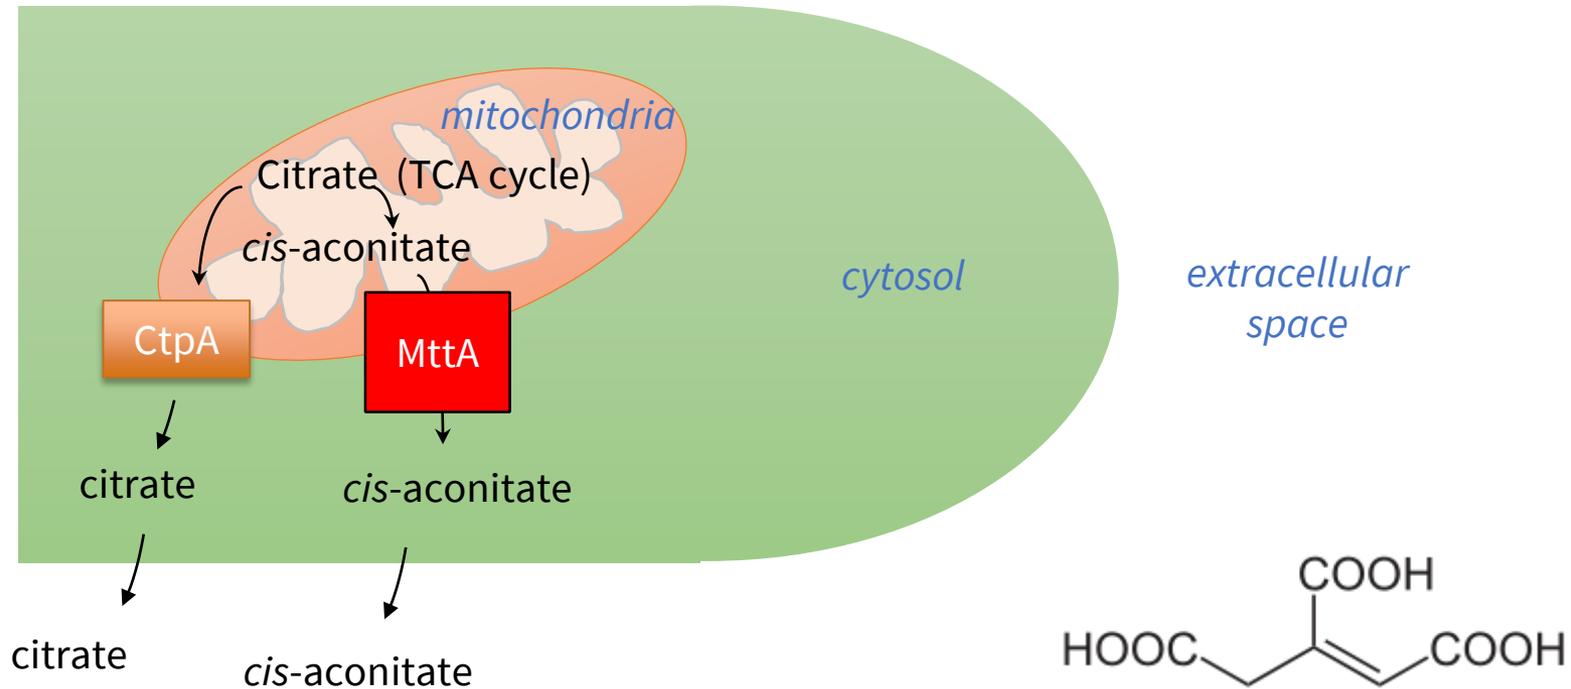

# Lactic acid

- Engineering of metabolic pathway
- Introducing a lactate dehydrogenase (*ldh*) from *Lactobacillus plantarum*
- Cultivation under microaerobic conditions

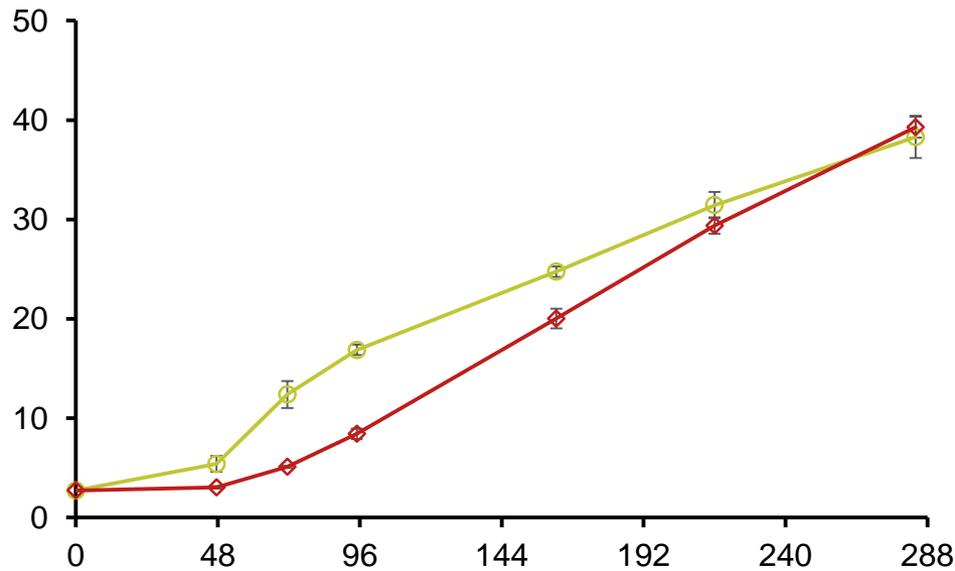

# Aspergillus niger

- Production host citric acid production
- Changing the product pattern by engineering a mitochondrial transporter

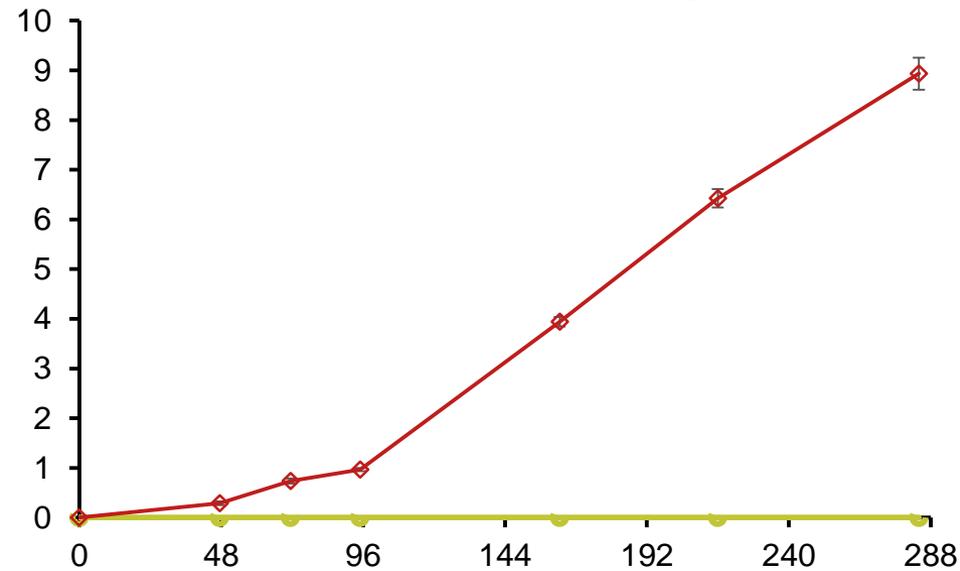

# Aspergillus niger

Citric acid [g/L]

Aconitic acid [g/L]

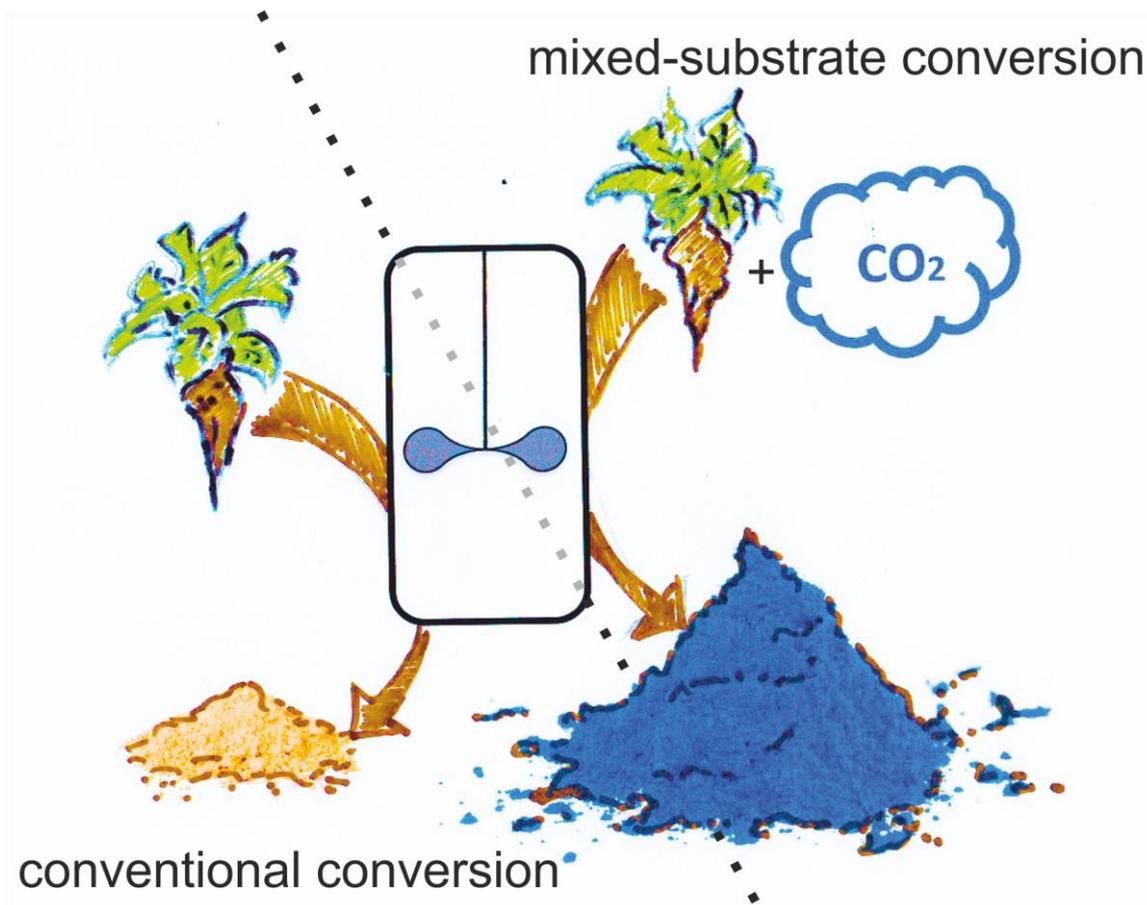

*Aspergillus niger* ATCC1015

*Aspergillus niger* ATCC1015 + *teton::mttA*

Sarkari et al. 2017 *Bioresour Technol*  
Steiger et al. 2016 *Metab. Engineering*

# Outlook: Production of organic acids to fix carbon dioxide

Martina Bellasio

Parveen Sarkari
