

Turning sunlight into seafood

LARA (Land-based Automated Recirculating Aquaculture)

Algae Unit

Solar energy is converted into biomass by selected strains of photosynthetic algae.

Zooplankton Unit

Zooplankton is grown using algae from the first unit. Concentrated Zooplankton serves as feed-substitute for the fish unit.

Fish / Shrimp Unit

Fish and shrimp is grown under ideal conditions with animal welfare at heart. Wastewater is recirculated back to the top, closing the water cycle.
